### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### **DETAILED ACTION**

This is the sixth office action for U.S. Application 10/807,521 for a Hanger filed by Alvin Kaplan on March 22, 2004. Claims 1-8, 10, and 12-19 are pending.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12 and 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,216,804 to Terry et al. Terry et al. discloses an apparatus including a hanger and a fabric article (62). There is a hanging element (32) and a shaft (20 or 22) having a top end and a bottom end, the hanging element disposed on the top end of the shaft. There is a support element (18... see fig. 3) disposed on the bottom end of the shaft and extending outwardly therefrom to provide a support base, the support element being pivotally connected to the shaft and pivoting between a first position approximately coplanar with the shaft and a second position approximately perpendicular to the shaft. The article (62) is rolled around the shaft and the base supports the article in a vertical position. There is a header element (30) disposed on the shaft between the hanging element and the article, and the header element is rectangular in cross section. Terry et al. does not disclose the article as being a cylinder, or the header element as being trapezoidal, but the specific shape of the two

elements is a matter of design preference that would be obvious to one of ordinary skill in the art.

***Allowable Subject Matter***

Claims 1-8, 10 and 19 are allowed. Claims 13, 14, 16, and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
